

[Buy Now GraphQL](#)

FEATURES

- The Buy Now module offer GraphQL to get store configuration of it.

How to install the extension

1. Install via composer (recommend)

- Enable maintenance mode **php bin/magento maintenance:enable**
- Run the command **composer require mageinic/buy-now-graphql**
- Run the command **php bin/magento module:enable MagelNIC_Core MagelNIC_BuyNowGraphQL**
- Run the command **php bin/magento setup:upgrade** to install the extension
- Run the command **php bin/magento cache:clean** to clean the cache
- Disable maintenance mode **php bin/magento maintenance:disable**
- Check the store environment if everything is working properly. If, at any point, the store displays an error, check the Magento logger for more details.

2. Upload via ZIP/Archive

- Back up your store's database and web directory
- Download the extension zip file and extract the zip file
- Transfer the **MagelNIC** folder to the Magento 2 **app/code/** directory on the server
- Enable maintenance mode **php bin/magento maintenance:enable**
- Run the command **php bin/magento module:enable MagelNIC_Core MagelNIC_BuyNowGraphQL**
- Run the command **php bin/magento setup:upgrade** to install the extension
- Run the command **php bin/magento cache:clean** to clean the cache
- Disable maintenance mode **php bin/magento maintenance:disable**
- Check the store environment if everything is working properly. If, at any point, the store displays an error, check the Magento logger for more details.

Store Configuration

- Please include the following query in the body section to fetch the module store configuration value.

End Point : `{{baseurl}}/graphql`

{

```

storeConfig {
    buynow_enable,
    button_title,
    keep_cart_products,
    show_on_product_detail_page,
    show_on_wishlist_product
    show_on_listing_page,
    show_on_compare_list_product,
    show_on_related_product,
    show_on_upsell_product,
    show_on_cross_sell_product,
    show_on_widget_product
}
}

```

Response :

```

{
  "data": {
    "storeConfig": {
      "buynow_enable": "1",
      "button_title": "Buy Now",
      "keep_cart_products": "1",
      "show_on_product_detail_page": "1",
      "show_on_wishlist_product": "1",
      "show_on_listing_page": "1",
      "show_on_compare_list_product": "1",
      "show_on_related_product": "1",
      "show_on_upsell_product": "1",
      "show_on_cross_sell_product": "1",
      "show_on_widget_product": "1"
    }
  }
}

```

You receive store configuration data set on the backend, including:

- **buynow_enable** : You receive a module configuration that enables or disable.
- **button_title** : Receive button title which is set in backend.
- **keep_cart_products** : Get keep cart product configuration set Yes or No in boolean like 0 or 1.
- **show_on_product_detail_page** : Show button on product detail page status.
- **show_on_wishlist_product** : Show button on wishlist product list status.
- **show_on_listing_page** : Show button on category product list page status.

- **show_on_compare_list_product** : Show button on compare product list status.
- **show_on_related_product** : Show button on related product list status.
- **show_on_upsell_product** : Show button on upsell product list status.
- **show_on_cross_sell_product** : Show button on cross-sell product list status.
- **show_on_widget_product** : Show button on widget product list status.

Note: Please note that if you receive "1" in the response, it indicates that the admin has set "Yes" in the backend. On the other hand, if you receive "0" in the response, it means "No."
